- Battery is charging
Before operating Trilogy 200, you need to configure the circuit type.

In the Set-up menu, select "Passive" for circuit type.
Active exhalation valve with proximal airway pressure circuit

![Diagram of Trilogy200 circuit components]

- Tracheostomy tubing
- Mask without integrated leak
- Proximal pressure port
- Exhalation valve
- Flexible tubing
- Proximal pressure line
- Exhalation valve line
- Trilogy universal active PAP tube adapter
- Bacterial/viral filter (optional)

⚠️ In the Set-up menu, select "Active PAP" for circuit type.
In the Set-up menu, select "Active flow" for circuit type.
Make sure Trilogy200 is turned off before taking the following steps

1. Press and hold the and buttons for a few seconds to access the Set-up page.
2. Select Settings And Alarms.
3. Navigate to Circuit Type and press Modify.
4. Use the button to choose Active PAP, Active flow, or Passive and then press OK twice to confirm.

Setting the circuit type
Setting menu access
